Install new/updated technologies and replace aging or no longer supported hardware on a planned basis to decrease the likelihood that airport operations are hindered by delays in data, information transmission, and access. Projects include, but are not limited to, replacing/upgrading operational workstations, servers, switches, and miscellaneous information technology infrastructure necessary for airport operability and/or when the life cycle has expired.

Project Description/Justification:

Keeping IT infrastructure current is the best way to enable support of new and current applications and users. Operations at the airport are affected by the current state of information technology. The challenge for IT is to provide a common infrastructure that is secure with high availability and efficiency. Application integration will build on that infrastructure to provide high data availability and efficiencies. Implementation of standards-based systems will allow facilities, equipment, and personnel to be used in more flexible and productive ways.
